Ex. No. 4	Utilize the Assets and Media
Date of Exercise	07/09/26
GitHub Host Link	https://github.com/jomiwilson/flutter_lab_exp4

Aim

To add and display image, audio and video assets in a Flutter application.

Description

This experiment demonstrates how to configure and use media assets in a Flutter application. An image is added through the assets directory and registered in pubspec.yaml for use in the app. Image.asset and GridView.count are used to display individual images and build a simple image gallery.

Tools/Software Required: Flutter

Procedure:

Step 1

Create project:

```
flutter create media_app
cd media_app
```

Step 2 – Create asset directory

Inside the project:

```
media_app/
├── assets/
│ ├── images/
│ ├── audio/
│ └── video/
```

Step 3 – Add an image

Copy an image into:

```
assets/images/
```

For example:

```
assets/images/flutter.png
```

Step 4 – Modify pubspec.yaml

Add:

```
flutter:
  assets:
    - assets/images/
```

Be careful with YAML indentation.

Step 5 – Get packages

```
flutter pub get
```

Step 6 – Display image

```
Image.asset(
  'assets/images/flutter.png',
)
```

Step 7 – Create image gallery

```
GridView.count(
  crossAxisCount: 2,
  children: [
    Image.asset('assets/images/flutter.png'),
    Image.asset('assets/images/flutter.png'),
  ],
)
```

Step 8 – Test

```
flutter run
```

Program

pubspec.yaml (assets section)

```
flutter:
  uses-material-design: true
  assets:
    - assets/images/
```

lib/main.dart

```
import 'package:flutter/material.dart';

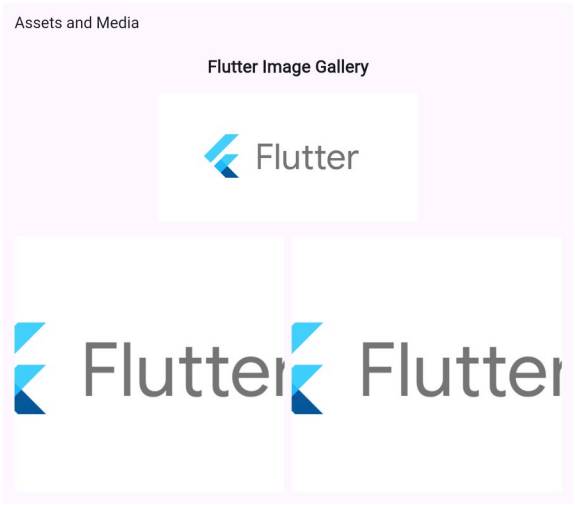

void main() {
  runApp(const MyApp());
}

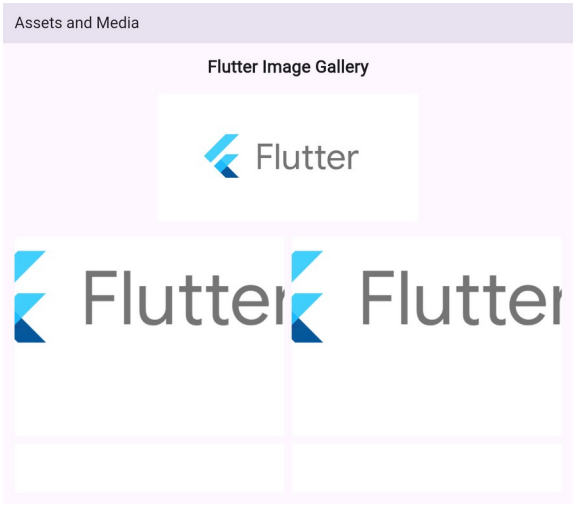

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      debugShowCheckedModeBanner: false,
      home: Scaffold(
        appBar: AppBar(
          title: const Text('Assets and Media'),
        ),
        body: Column(
          children: [
            const Padding(
              padding: EdgeInsets.all(16),
```

```
              child: Text(
                'Flutter Image Gallery',
                style: TextStyle(fontSize: 20, fontWeight: FontWeight.bold),
              ),
            ),
            // Single image loaded from the assets folder
            Image.asset(
              'assets/images/flutter.png',
              height: 120,
            ),
            const SizedBox(height: 16),
            // Image gallery using GridView
            Expanded(
              child: GridView.count(
                crossAxisCount: 2,
                padding: const EdgeInsets.all(8),
                mainAxisSpacing: 8,
                crossAxisSpacing: 8,
                children: [
                  Image.asset('assets/images/flutter.png'),
                  Image.asset('assets/images/flutter.png'),
                ],
              ),
            ),
          ],
        ),
      ),
    );
  }
}
```

Output

Result

A Flutter media application was created and configured to use local image assets. The asset directory was added and registered correctly in pubspec.yaml. The configured image was displayed using Image.asset and arranged in a gallery using GridView.count. The application successfully loaded and displayed the configured media assets.
